

Meritage Medical expands its geography by enhancing its scalability with Henson Group.

Discover how Meritage Medical got rid of its physical on-premise server by migrating to Microsoft Azure.

Meritage Medical's Challenge

Meritage Medical wanted to expand its business globally by leveraging the power of seamless operations. However, maintaining its hardware, and patching and Windows update, Meritage Medical was marred with needless overheads. Belonging to the medical industry, the client was also looking for a partner to handle its compliance regulations to cut its compliance overhead as well.

To add to the above problems, with pandemic normalizing remote work, client's employees had to connect to a non-scalable, on-premise office server, which left them baffling with issues like latency and poor user experience. The client was also struggling with a low Internet bandwidth in its office premise, restricting it from performing regular operations. The client was also concerned about backups and data recovery in case of any mishap.

Working With Henson Group

The Henson Group (THG) began as a service integrator and 16 years later is an award-winning CSP partner. The group specializes in cloud computing with a major focus on Microsoft Azure. With the group's technology expertise, they offload IT workloads, manage client servers, and upgrade existing packages. As a premier provider of Microsoft licensing and managed services, THG was able to resolve Meritage Medical's issues. Azure Site recovery mechanism migrated Meritage Medical's workloads from physical on-premise servers to Azure Datacenter, allowing the client to achieve disaster recovery and data sovereignty.

THG also configured a site-to-site VPN tunnel between the client's on-premise office location to Azure Datacenter for secure connectivity. THG further deployed and configured an additional domain controller in Azure to enhance its scalability. With Azure Virtual Machine (VM) the client could scale up and down its server, depending on its need to reduce latency and improve user experience. Meritage Medical was now able to create and delete servers or any Azure resources within few minutes. Moreover, the client could access the Azure VM remotely from any device with dedicated internet connectivity. Azure Site Recovery (ASR) helped the client with its Business Continuity and Disaster Recovery (BCDR) to keep the business running. Azure Backup was deployed to run a regular automated backup to prevent any data loss and enhance scalability.

Meaningful partnership

The Henson Group, a Microsoft Gold Partner, worked relentlessly to offer their full support to Meritage Medical by migrating client's critical applications successfully to Azure after running a series of cycle-tests to ensure a glitch-free execution. By automating its Update Management, Compliance system, and cloud migration, Meritage Medical was able not only to cut its costs but also to focus on its core operations - thereby allowing it to expand its geography.

Why Microsoft Azure?

Using the Microsoft Azure platform allows growing businesses like Meritage Medical to focus on its core operations by sharing its IT load and overheads. If the focus of your business is to increase your global reach, then Microsoft Azure is all that you need.

"I would like to thank the dedicated team of THS for executing a successful migration to Azure Cloud for Meritage Medical. Their matchless leadership has been instrumental in the completion of this project. Looking forward to more collaborations with a team that is competent and customer-centric."

Joel Bing, Systems Administrator, Meritage Medical
